## HOMEOWNER'S DECLARATION FORM

The owner of anything, process or activity to which this (Safety Codes Act) Act applies shall ensure that it meets the requirements of this Act, that the thing is maintained as required by the regulations and that when the process or activity is undertaken it is done in a safe manner. (2011-20-45-1-97)

"Homeowner" means a person as the owner of the fee simple estate of land, who resides or, with respect to a residence that is under construction, intends to reside in a freestanding single family dwelling, located on the land.

(A) You must **OWN** and **LIVE IN** or **WILL LIVE IN** the single family residence in which you wish to do the work for the following permits: building, electrical, plumbing or gas;

(B) You must have knowledge and be personally capable to perform the work/installation.

I am the registered Homeowner, whose name appears on the land title of the property indicated below and accept full responsibility for the work I propose to do that will be in compliance with the Safety Codes Act and Regulations. All information provided is true and correct.

Having read and understood the above conditions I declare that I know how, will **PERSONALLY** install and take full responsibility for the work I propose.

Note: A permit is not a guarantee or assurance of the quality of the work, system, or project to be undertaken, nor does it guarantee the longevity of a material, product, or assembly. The undertaking needs to satisfy the requirements of the applicable Codes and Standards.

## SITE EVALUATION REPORT

The information requested in this document must be submitted with the permit application as required by the Private Sewage Systems Standard of Practice 2009.

**INCOMPLETE APPLICATIONS WILL BE RETURNED.**

Permit Number (to be assigned by the Permit Issuer): \_\_\_\_\_

Owner's Name: \_\_\_\_\_

Installer's Name: \_\_\_\_\_

Legal Land Description: \_\_\_\_\_

A detailed diagram of the site where the sewage system will be installed **must** be included.

The following information is to be shown on the diagram and must be to scale:

- Property size (in acres)
- All boundary lines including the lengths in feet or meters
- Buildings, roads, driveways and other property improvements; existing or proposed
- Existing easements
- Wells, cisterns or proposed water source locations on the property
- Surface waters, rock outcrops and drainage features
- Topography of the proposed treatment site \*\*
- Soil test pits locations with surface elevations \*\*
- Location of a permanent benchmark and it's elevation \*\*
- Outline of available treatment areas \*\*

\*\* Not required for the installation of a sewage holding tank.

## SOIL PROFILE REPORTING

The characteristics of each soil profile investigated shall be described using the Canadian System of Soil Classification nomenclature and include the following in the soil profile description:

- Soil Horizons** – the distance from the ground surface to the top and bottom of each soil horizon observed shall be measured and distinctness and topography of the horizon boundaries described.
- Soil Color** for each soil lies and identified, the matrix color and quantity, size, contrast, and color of any redoximorphic features present shall be described.
- Texture** for each horizon identified, the soil texture classification including any appropriate texture modifier shall be reflected in this evaluation report and a **soil sample of the most restricting layer** affecting the design shall be collected and **analyzed at a laboratory** using a recognized grain or particle size analysis method to determine the texture of the same.

**NOTE: Other than Sandy Clay any texture that uses the word SAND in its description must include sand particle size.**

- Soil Structure** and grade of structure identified for each horizon.
- A statement regarding the treatment capability and dispersal capacity of the available site(s).
- Where the soil profile includes features that will require the lateral movement of water through the soil away from the dispersal system, identified constraints on the system design and allowable effluent hydraulic loading rates, as it relates to linear loading rates.
- A summary of the significant limiting conditions of soil profile and site.
- A justification of the locations and number of the soil profiles investigated.
- A description of the development being served including:
  - Characteristics affecting the determination of peak and average wastewater flows to be used in the design,
  - The peak daily wastewater flow volume to be used for the system design, and
  - Anticipated effluent wastewater strength.

*soil profile report con't.*

- Copies of laboratory soils analysis reports have been attached.
- Number of soil profiles investigated; a minimum of two (2) test pit excavations shall be investigated at the proposed location for the soil-based treatment component to classify and assess the treatment capacity of the soil.
- Minimum depth of soil investigation (choose appropriate depth as per YOUR design). The soil profiles shall be investigated to a minimum depth below ground surface of:
  - 4 feet for Treatment Mounds.
  - 9 feet for Treatment Fields receiving primary treated effluent (septic tank effluent).
  - 6.5 feet for Treatment Fields receiving secondary treated effluent (treatment plant, sand filter effluent)
  - 6 feet for Open Discharge systems.

**NOTE:** When the site evaluation report is complete the information from the report is to be used to produce your System Design Report. This includes any features that would require peak flow to be increased.
